"Large and small splice variants of collagen XII: differential
expression and ligand binding.";
J. Cell Biol. 130:1005-1014(1995).
-i- FUNCTION: Type XII collagen interacts with type I collagen-
containing fibrils, the COL1 domain could be associated with the
surface of the fibrils, and the COL2 and NC3 domains may be
localized in the perifibrilar matrix.
-i- SUBUNIT: Trimer of identical chains each containing 190 kDa of
nontriple-helical sequences.
-i- ALTERNATIVE PRODCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TISSUB-Embryo;

                                                                                                                                                                       ligaments, perichondrium, and periosteum, all dense tissues containing type I collagen.

DOMAIN: This sequence defines five distinct domains, helical domains (COL) and COL2) and three nontriple-l domains (NC1, NC2, and NC3).

PTM: The triple-helical tail is stabilized by disulfi
                                                                                                                                                                                                                                                                                                                  Name=Short;
IsoId=P13944-2; Sequence=VSP 001148;
TISSUE SPECIFICITY: Type XII collagen is present in tendons,
TISSUE specification, and periosteum, all dense connect:
                            unit
